

Simple. Safe. Minimax monitoring system with radio transmission

Sprinkler Monitoring Interface SMI

Modern wireless technology is now used to monitor your system. In addition to the display on the monitoring panel, you can now conveniently read the functional condition of the system via an app after successful authentication. This not only makes it easier to troubleshoot the system, but also helps to quickly restore operational reliability.

Simple:

- Faults no longer have to be called up at the monitoring panel
- The app indicates when shut-off valves are not fully open or when fill levels, pressures or temperatures do not correspond to the set values
- Clear display of information on the Android device

Safe:

- VdS-approved system
- Authentication via NFC and Bluetooth directly at the system
- No access to system data possible from outside
- Complies with ETSI standard EN 300220-1, category 2
- Interference immunity VdS tested
